

You need

- ✧ Playing cards (use ♥, ♠, cards A and 2 to 5)
- ✧ PCM 34 (Number Pairs -)
- ✧ PCM 30 (Number Pairs +)
- ✧ Calculator

1. Choose who is Player A and who is Player B.
2. Place the cards face down.
3. Player A turns over 2 cards. If the 2 cards are different colours, Player A turns them face down and scores 0.

If the cards are both red, Player A keeps the cards and adds the 2 numbers together.

If the cards are both black, Player A keeps the cards and takes away the smallest number from the biggest number.

4. Player B has a turn.
5. Take turns until all the cards are gone.
6. Add up your own score using a calculator. The player with the highest score wins.
