

You need:

- ☆ 1 dice
- ☆ Pen and paper

1. Roll the dice. Write the number down.
This will be the number you divide by.

2. Roll the dice again. Divide this number by the first number you wrote down. Write down the answer using fractions.

$$6 \div 4 = 1\frac{1}{2}$$

3. Do this 10 times.
4. Add your 10 scores to get your game score.
5. Play the game again and see if you can beat your game score.
The highest possible game score is 60.
How close did you get?
